Bracknell, UK

Dear Hiring Manager,
I am writing to express my interest in the Software QA Tester position within your organisation. With nearly three years of professional experience in Software Quality Assurance, combined with a Master's degree in Information Systems Management, I am confident in my ability to contribute to your team by ensuring software quality, reliability and a positive user experience.

During my time at Axians Portugal and Capgemini Portugal, I gained valuable experience testing web and mobile applications, designing and executing test cases, identifying and managing defects, and supporting software release processes. At Axians, I designed and executed over 300 manual test cases, performing functional, regression, exploratory, usability and user acceptance testing. I also worked closely with developers, Product Owners and DevOps teams within Agile/Scrum environments to investigate issues and improve overall product quality.

My technical skills include manual testing, API testing using Postman, and foundational automation testing with Python, Selenium and Cypress. I am also familiar with Jira, Azure DevOps, Trello and JMeter, as well as test planning, defect lifecycle management and QA documentation.
In my current role at PCS Wireless in the UK, I perform functional and diagnostic checks on electronic devices, identify potential issues and ensure accurate quality inspections. This experience has further strengthened my attention to detail, analytical thinking and commitment to maintaining high-quality standards.
I am a proactive, detail-oriented and adaptable professional who enjoys solving problems, learning new technologies and collaborating with different teams. I am particularly motivated to continue developing my career in Software Quality Assurance and to contribute my knowledge and experience to a forward-thinking organisation.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience, technical skills and motivation could contribute to your team.

Kind regards,
Pedro Carlos
